

▶ **COMPUTER FORENSICS**

**Computer Forensics—
New Trends and Technology**

Computer forensics requires specific expertise that goes beyond the normal data collection and conservation techniques available to most corporate I/T system support personnel. Our analysis exceeds all rules of evidence and will stand up to the scrutiny of any court and our reports are comprehensive, yet clear to non-technical readers and have been proven in legal proceedings.

We will discuss how a proactive approach to intellectual property theft benefits your case, the many new ways that information is leaking from your organization, the new technologies and what their capabilities are in the computer forensics arena.

We will also open the floor to questions you may have about computer forensics and how it aids in winning cases and also about our past experiences supporting lawyers.

▶ **DUE DILIGENCE**

**Due Diligence—
An Analytical Approach**

The SSC Corporate Intelligence and Investigation team helps lawyers win cases. Our investigation services are tailored to your specific needs and meet the highest standards of confidentiality, impartiality, legality and professionalism.

Our discussion will cover why due diligence investigations should be performed, how SSC conducts due diligence investigations and why SSC is different from other litigation support firms, and our unique approach to reviewing due diligence findings and our analytical review.
